

IIT Delhi Robotics Consortium for Industry Connect (with sponsorship of full-time MTech Students)

Preamble: IIT Delhi is establishing a consortium of Robotics industry leaders to help develop the Robotics eco-system. This would facilitate research collaboration and joint projects, consultancy on technical problems, avenues for transfer of technology, discussions on curriculum and student projects, and opportunities for student development, internship, and placement.

Benefits: In addition to branding (with companies' logos) in IITD Robotics events and brochures, the consortium membership will include invitation to events for promotion of internship opportunities and recruitment to Robotics UG and PG students. Members will also receive invitation to programmes organized by the IITD Center of Excellence on Biologically Inspired Robots and Drones (CoE BIRD).

Sponsor Program: Members will have the opportunity to directly engage with Mtech students through a sponsor program. Sponsors will be able to assign proof of concept projects to students and interact with IIT Delhi faculty experts on these projects. This would present an invaluable opportunity to evaluate well trained and well rounded Robotics Mtech graduates for possible recruitment. Two types of sponsorships are possible:

- I. A consortium member may sponsor a full-time GATE-qualified Mtech assistantship at ₹4L (USD 6,000) per student on a two-year basis. This amounts to a total of ₹8L (USD 12,000) for one student for a two-year period, and includes the consortium membership fee of ₹2 Lakh[†] (USD 3,000[#]) per year. The cost for additional students will remain ₹4L (USD 6,000) per student for a two-year period. In addition to the general consortium membership benefits listed above, a GATE-qualified M. Tech (Robotics) student will be assigned to work for 8 hours a week on a company-designated project as Research Assistant (RA), including summer (about 6 weeks) and winter (about 3 weeks), and to conduct the Masters project under the supervision of IITD faculty on an application of interest to the company. (This fellowship is at par with and in addition to those funded by IIT Delhi sources including IIT Delhi section 8 companies.)
- II. A consortium member may *directly* sponsor a full time Mtech student (no GATE required) A list of applicants to this program who are shortlisted by IIT Delhi after a merit review will be forwarded to the interested consortium members for consideration in Jun-Jul each year. If a member selects any students for direct sponsorship, they will commit to paying full-time tuition for such a student (currently ₹75,000 per semester) for four semesters and a stipend to the student, no less than the IIT Delhi fellowship (currently ₹12,400 per month for 24 months). The student will be available for at least 8 hours a week on company assignment and full time during summer/winter, and to conduct their Masters project under the supervision of IITD faculty on an application of interest to the sponsor. These costs are exclusive of the consortium fees of ₹2L (USD 3,000) per year, and the membership must be maintained for the duration of the sponsorship.

Contact: To join the consortium/sponsor program, or for information, please contact robotics@iitd.ac.in.

Website: <https://robotics.iitd.ac.in>

[†] All rates will be reviewed after two years. Amounts are exclusive of applicable taxes.

[‡] Companies may join the consortium without sponsoring any student, for which the fee is Rs 2L (USD 3,000) per year.

[#] USD rates apply to foreign companies.
